[136] southern ranges of the Nevada herds. However, small herds did range in the eastern portion of Washo country, but the appearance of firearms and livestock eliminated the antelope completely in this area. One informant, himself seventy-five, remembers stories about the hunts, told to him by a very old brother-in-law who remembered the antelope songs.

[177]
[538]
[533] Another informant, generally a good source of hunting information, admitted that he did not know anything about the subject. He had never hunted antelope, nor had his father or uncle.

[787] The signal to hunt was a dream announcing the presence of antelope to a dreamer, who acted as leader of the hunt. The entire process was considered to be magical by this informant who said:

[624]
[791] "There was really no corral. Maybe just a few piles of brush. The people just danced around and sang, and that kept them antelope there like they was hypnotized. They could keep them right there all night that way. After they held them all night they'd start to slaughter at sunrise. They'd sing: 'We aren't doing this for meanness or for fun but we want you for fine food,' or something like that. I heard the song once but I never learned it all. I wish I had, now."

[763] This informant was certain that the Washo did not expect a person to die as a result of the exercise of antelope charming. He had heard of other tribes which believed this, and he thought it peculiar (Stewart 1941: 218-220). This explanation compares favorably with the culture element distribution lists presented by

[186] Stewart, which reported some of the traits usually considered as part of the shaman complex in antelope hunting common among Basin Shoshone and Paiute. (Stewart 1941; Stewart 1941.)

[237] Rabbits (92-94). -The pursuit of the jack rabbit appears to have been changing in its importance during the past century. Several informants recall being told in their youth by old men that often only the hides were stripped from rabbits to make blankets, but that most of the meat was discarded because other game was plentiful. However, firearms and agriculture soon put an end to antelope hunting, and the trans-Sierran region, like most of the nation, suffered a steady decline in the number of deer. All informants agree that in their own youth trips to California after deer were necessary because there were almost no deer east of the Sierra. All Indians agree that the deer population in Nevada today is far greater than it was in the early years of this century. The decrease in antelope and deer forced a greater dependence on the jack rabbit as a source of food as well as fur. The communal nature of the rabbit hunt may have made possible a gradual transference of ritual traits from the antelope complex to the rabbit hunt.

224
[171] Traditionally the Washo drove rabbits into nets, a method common in the Basin. Stewart's notes, taken from informants in their seventies in 1936, make no mention of any supernatural aspect of the rabbit drive. Evening dancing during the rabbit drive was denied.

791 There was, however, a special leader who directed the hunt. In later times these men were credited with dreaming power, as this quotation illustrates: "Jack Wallace would dream where the rabbits were and when it was time for hunting he would send out a call." The man mentioned was described as the last of the real

The entry of white men was met in much the same manner by the two groups: avoidance on one hand and an attempt to exploit on the other. In the 1850's the Paiute developed a new social structure, based on the horse, and territorially oriented mounted war bands began attacking the white man. This hostile activity went on until 1870 when the Paiute were finally defeated and contained on reservations. After a short-lived nativistic revival the Paiute, on and off reservations, began to farm and raise livestock. Another nativistic revival occurred in 1890 and spread throughout the Plains tribes. Since that time the Paiute have continued to develop as farmers and ranchers, rather rapidly abandoning many Indian practices. On the other hand they have retained a strong identification as Indians and tend to emphasize the more colorful aspects of being Indians through the retention of dances and ceremonies, many of them of Plains inspiration. The relation of the Paiute to the white man has been largely friendly since the cessation of hostilities and the Paiute is generally tolerated, and a few exceptional individuals respected, by the whites in Nevada. There has been a steady increase in the degree of tribal political organization over the entire period of contact.

The Washo appear to have attempted to continue the first response pattern with only a shift in emphasis during the past quarter century. Avoidance and exploitation have gradually given way to dependence, economic involvement and segregation of the Washo. The aboriginal band-land relationship broke down, but attempts to maintain modified bands as squatters on individual ranches continued until the 1920's. Hunting and gathering continued and still goes on. However, tribal organization, however slight it may have been, seems to have been lost. The failure of the Washo to unite against the white man seems to have resulted in the latter's failure to take notice of the Washo as a group. Since the reservation system was never instituted for the Washo, they remained squatters until the early 1900's and then were assigned scattered allotment lands. The attempt to adjust individually to the new situation appears to have led to a general fragmentation of Washo society. Certain ceremonies and shared cultural values identify Washo but a high degree of suspicion and disunity are characteristic of the group. Factions spring up over every issue: how to deal with the white man, the creation of a tribal council or a Peyotist movement. There is a general tendency to attempt to hide or deny specifically Indian traits. In general the relation of the Washo to the white man is that of avoidance wherever possible, and of ill concealed hostility and suspicion on both sides of the fence.

Materially both groups have accepted a great deal from the white man. Wooden houses have replaced native shelters. Factory clothing is worn.

The automobile is used by both groups. Only a few old women among the Washo still weave baskets. Gathering lore is still passed on among Washo women, although there is a tendency to hide this from whites. Only the bed-rock mortar, basketry, pinyon picking tools and rabbitskin blankets seem to have survived as useful items in modern Washo life. The colorful paraphernalia of the Peyote Church is, of course, inspired by modern Peyotists and does not represent aboriginal Washo survivals. The Washo have turned to day-labor and odd-jobbing for economic support and have rejected agriculture or ranching, although there is a growing admiration for the cowboy. The Paiute have become to a large extent relatively successful farmers.

Washo change, then, can be characterized as an attempt to adapt aboriginal patterns to the new situations created by the entrance of the white man.

The Paiute, on the other hand, must be described as attempting to find new orientations of social and cultural behavior to meet the changing situation. We see three major shifts in Paiute activity over the past century.

The differences in response have been related to historic relationships with other Indian groups which have their basis in the distribution of the buffalo.

It has been suggested that the buffalo once extended much farther south and west than they did in the 1840's and that the Paiute shared a common ecological adaptation with other peoples in the northern part of the Basin. The withdrawal of the bison created two environmental zones but did not break off intertribal relations based on the former common subsistence patterns. Thus, when the Paiute were further impoverished by the introduction of white livestock into their gathering areas they responded by taking up the horse and a modified war complex, as revealed to them by visiting Shoshoni and Bannock, and entering into hostile actions against the whites. This led the whites to treat Paiutes as a unit, and, after their final defeat, to assign them to reservations. The reservation system not only emphasized Paiute unity and encouraged political development but also provided land for farming.

W

182

The Washo, on the other hand, lived largely outside the area of buffalo range and therefore suffered no loss or ecological imbalance because the big animals became extinct in the region. Their response to the white man was simply to attempt to utilize what he brought into the new area and to modify the relatively successful Washo adaptation as little as possible. As a result, Washo organization, based on ecology, broke down as the ecology changed. The Washo lost even the minor tribal structure they had once had; bands changed and finally disappeared. The lack of unity prevented this group from

3. This success must be viewed in relative terms. It is more accurate to say that the Paiute thrive in terms of stock raising and farming but most Washo do not.

However, most men

who attended Stewart express resentment at being worked on the school farm, although they evidence pride over their attendance and resent bitterly that the school now serves Indians of many tribes.

In the past and today, local white folklore holds that Washo are inexperienced horsemen and cannot learn to be cowboys. I can neither confirm nor deny this opinion, because I failed to see a single Washo on horseback during my visit. One man, biologically if not culturally a Washo, owns a string of pack and riding horses which he rents to hunters for whom he serves as guide. However, this occupation appears to be one of the reasons other Washo feel he has "gone on the white man's road."

One significant but short-lived effect of the introduction of the horse was that it permitted rabbit hunters to kill more rabbits than in pre-horse days. Rabbit drives were usually conducted by men using bows and guns, the net having been abandoned very soon after white contact. Each man carried his kill on a belt that could hold up to 17 rabbits. A hunter with a horse could have his wife, son, or younger brother ride or lead a horse behind him to carry the kill. In this way, a good shot could take as many as 40 rabbits a day. However, the very nature of this utilization discouraged the wider institutionalization of the horse. Following the hunter required no equestrian skill and, in fact, was a secondary role to be abandoned as soon as the rider, if he was a boy, was old enough or could afford a weapon of his own.

Older informants recall that some Washo were hired as riders to accompany cattle herds to the railhead or into high range. It is significant that they mention specifically that only this temporary type of herding job was available and make it clear that no Washo became a year-round cowboy.

It appears clear from statements of informants that Washo quickly adopted the automobile and abandoned wagons and teams. As Cook points out, the automobile gave back to the pedestrian Indian a mobility he had lost during the interval between the appearance of the whites and the development of the automobile (Cook, 1941, 84). I feel that this change took place because the Washo had never made the adjustments necessary to maintain horses or other livestock efficiently, and therefore welcomed the automobile, which ceased to make demands on its owner's time and attention as soon as he turned off the ignition and got out. Moreover the appearance of the railroad within a few years after the arrival of the whites obviated the need for the horse for long-distance travel. Early day railroad "public relations" policy permitted Indians throughout the West to ride without charge. In return, the Indians often warned railroaders of broken track, washouts, and other obstructions.
